Water Conservation Program Begins in Sharon - February 2008

The Town of Sharon Water Department received a grant from the Massachusetts Department of Environmental Protection for a one year water conservation program to reduce residential water consumption. The program includes development of a water conservation plan to assist the Town in meeting water conservation goals. It also includes development of a conservation curriculum within the Sharon schools, outreach to civic groups, retrofitting of municipal buildings with low flow toilets, installation of water saving irrigation systems, and general education about water saving practices

through newspaper columns and the internet. The Water Department has partnered with the Neponset River Watershed Association to help facilitate the grant and has hired a Water Conservation Coordinator to assist in the program.

The Water Department has also teamed with the U.S. Environmental Protection Agency's (EPA) WaterSense program to help consumers save water for future generations and reduce costs on their utility bills. WaterSense aims to decrease indoor and outdoor water use through water-efficient products and simple water-saving practices. The program encourages customers to look for WaterSense labeled products, which have been independently certified for efficiency and performance, and promotes water-saving techniques that reduce stress on water systems and the environment.

For more information about the grant contact Eric Hooper, DPW Superintendent at 781-784-1525 or Ian Cooke, Executive Director of the Neponset River Watershed Association at 781-575-0354.
