ADA IMPROVEMENTS TO SHARON STATION

MBTA CONSTRUCTION ADVISORY ADA IMPROVEMENTS TO SHARON STATION NIGHT WORK

The MBTA is continuing the process of preparing for installation of new ADA Mini-High platforms at Sharon Station. The Contractor will need to perform additional work on the platforms in preparation for constructing the new Mini-High platforms. To continue to perform these services, it is necessary to work evening/night hours to perform the work related to the Mini-High platforms.

We understand how disruptive evening/night work can be to your neighborhood. In an effort to control the noise, we will take extra measures to try to control the noise during the Mini-High work.

For safety reasons, this work can only be performed at night after rush hours when ridership is lighter, and there is less train service occurring. This work related to the Mini-High platforms will continue through the end of July 2014 (July 31st).

We apologize for the inconvenience that you have experienced and thank you for your cooperation as we work toward project completion at Sharon Station.
