Notice of Aerial Mosquito Larvicide Application in Sharon Wetlands

The Norfolk County Mosquito Control District (NCMCD) will be conducting helicopter applications of the larvicide Bti (*Bacillus thuringiensis israelensis*) to control mosquito larvae in Sharon wetlands. The application will be carried out over specific large wetlands in town where mosquitos are known to breed. Application of larvicide significantly reduces mosquito populations over the course of the breeding season. Treatment with larvicide will be conducted for 2-4 days across Norfolk County, from approximately April 13 to April 24, 2015. Actual dates of application may vary depending on weather conditions. Property owners who do not wish to have the larvicide applied to their land should contact NCMCD at the number below.

The trade name of the Bti to be used is VectoBac GR (EPA Reg. #73049-486). For additional information on the larvicide please contact David Lawson, Direct of the NCMCD, at (781) 762-3681, or the Sharon Health Department at (781) 784-1500 x1140.
